

## 2010 ANNUAL REPORT

# Fond du Lac County Health Department

Serving our community since 1966

Protecting our future in 2034

# Message from the Health Officer

Fond du Lac County Board of Supervisors:

It is my pleasure to submit the 2010 Fond du Lac County Health Department annual report. The Health Department's vision is to eliminate or minimize all preventable disability, disease and death with programs that touch the lives of individuals from birth to death.

2010 saw the wrap up and hot wash of the Novel H1N1 influenza virus response. The preparedness training and exercising the staff has been involved with since 2003 enhanced our response. I had the opportunity to sit on the Wisconsin State Department of Health Expert Panel on Immunization Recommendations where many of the response plans we implemented were identified as best practice. An important outcome of H1N1 was offering seasonal influenza vaccine at school based clinics with the support of our healthcare providers. The Center for Disease Control recommends that all children receive seasonal influenza vaccine on an annual basis and the most effective and efficient method to vaccinate large numbers of children is to provide it where they spend the most time, which is in school. Through collaborations with school staff the Health Department vaccinated 4,000 children with seasonal influenza vaccine over a two week period in November, 2010. The prevention of diseases through immunizations is and needs to continue to be a core function of the Health Department.

The Health Department's Save a Smile Program has improved dental care access for children with Medicaid. Through ongoing discussions with our federal legislators and because of the unique public private partnership of the program, Fond du Lac County received \$400,000 in federal funds to support this program. These funds have allowed the program to serve an additional 1000 children.

The Health Department has operated a Medicare certified Home Health program since 1973. Since the inception of the family care program, we have been a provider for Creative Care Options, but as of January 2010 determined we could no longer continue due to a decrease in reimbursement. This was a difficult decision as it negatively impacted staff, but we could not justify subsidizing services with county tax dollars.

The staff and I would like to express our appreciation to Allen Buechel, County Executive, members of the Board of Health and to the County Board of Supervisors for your ongoing support. I would also like to recognize Nancy Larson, Home Health RN and Kay Stahmann, Personal Care Worker who retired in 2010 for their years of service to Fond du Lac County.

Sincerely,  
Diane Cappozzo  
Health Officer

## 10 Essential Services of Public Health

- ① Monitor health status and understand health issues facing the community.
- ② Protect people from health problems and health hazards.
- ③ Give people information they need to make healthy choices.
- ④ Engage the community to identify and solve health problems.
- ⑤ Develop public health policies and plans.
- ⑥ Enforce public health laws and regulations.
- ⑦ Help people receive health services.
- ⑧ Maintain a competent public health workforce.
- ⑨ Evaluate and improve programs and interventions.
- ⑩ Contribute to and apply the evidence base

# What does Fond du Lac County Health Department do for you and your community?

## Protecting, Educating and Providing

Public Health is the science of protecting and improving the health of communities through education, promotion of healthy lifestyles, and research for disease and injury prevention. Public Health focuses on improving the health of the general population (population-based) through broad-based interventions, as opposed to the health care system, which primarily focuses on the treatment of individuals. The population-based services provided by public health departments are a major contributor to the overall improvement of a community's health status.

**MISSION**  
**Promote and protect the health of all Fond du Lac County residents through assessment, advocacy, education, leadership and the provision of accessible services**

## Protects the community from health threats, the everyday and the exceptional

Fond du Lac County Health Department guards multiple fronts to defend you and our community from any health threat, regardless of the source, and work to prevent disease outbreaks. The Health Department's Environmental Health Specialists ensure the tap water that everyone drinks;

the restaurant food everyone eats and the air everyone breathes are all safe. Public Health Staff are ready to respond to health emergencies - be it bioterrorism, lead, SARS, West Nile Virus, H1N1 or an environmental hazard.

## Educates you and your neighbors about health issues

Fond du Lac County Health Department provides information that allows people to make healthy decisions every day, like exercising more, eating right, quitting tobacco or simply washing their hands to keep from spreading illness. Public Health staff provides this information through public forums in our community, public service announcements in the media, programs in schools, health education in homes and clinics, and websites. During a public health emergency, Fond du Lac County Health Department provides important alerts and warnings to protect your health and our community's health.

## Provides healthy solutions for everyone

Fond du Lac County Health Department offers the preventive care needed to avoid chronic disease and to help maintain health. Public Health Nursing provides flu shots for the elderly and others, and helps mothers obtain prenatal care that gives their babies a healthy start. Fond du Lac County Health Department also helps provide children with immunizations, Health Check and good nutrition through WIC to help them grow and learn.

## Advances community health

Fond du Lac County Health Department and its governing board, the Board of Health, plays a vital role in developing new policies and implementing evidence-based practices that address existing and emerging challenges to the community's health while enforcing a range of laws intended to keep everyone safe. The Health Department is constantly working to maintain its expertise and deliver up-to-date, cutting-edge health programs while evaluating program effectiveness. These efforts can not be done alone, but through community partnerships focusing on health priorities identified in the community.

## Our 2010 Programs and Services:

### Fond du Lac Area Council for

**Healthy Communities** is a coalition of community members, including the Health Department, that are working together to enhance the health and well-being of Fond du Lac County residents. Health is an individual responsibility but a community approach is also needed to effectively enhance, protect and promote the public's health. The Council, in 2008, identified the following health priority areas:

- Dental care access for children and adults with Medicaid
- Alcohol, tobacco and other drug abuse-binge drinking, abuse of prescription drugs
- Mental health-local access for children and adolescents
- Overweight/obesity

### Disease Control and Prevention

Wisconsin state law requires the reporting of over 150 communicable diseases to local public health agencies by healthcare providers, hospitals and labs. The Wisconsin Electronic Disease Surveillance System was fully operational in 2010 and allows for prompt investigation of potential outbreaks and the implementation of control measures to minimize further transmission of disease. In 2010 the number of communicable diseases decreased due to H1N1 influenza cases.

<u>Diseases</u>	<u>2008</u>	<u>2009</u>	<u>2010</u>
<b>Total Cases Reported</b>	525	707	491
<b>Sexually Transmitted Infections (STI):</b>

<b>Food /Water Borne Illness</b>			
Campylobacter	49	33	50
Cryptosporidium	30	24	24
E. Coli	3	1	6
Giardia	9	5	12
Salmonella	21	19	22
Shigellosis	15	3	0
<b>Vaccine Preventable</b>			
2009 H1N1	0	267	7
Mumps	1	0	0
Hepatitis A	1	1	0
Hepatitis B	7	3	3
Hepatitis C (not vaccine preventable)	26	18	16
<b>Tuberculosis</b>			
Latent	8	21	18
Active Disease	0	1	2

### Community Health Needs Assessment

A group representing Fond du Lac County health care providers began meeting in November of 2010 to develop a 2011-2016 community health needs assessment. The goals of this assessment are:

- Provide health data to identify and prioritize the health needs of our community.
- Develop action plans to address health priorities
- Engage community leaders to commit local resources toward health improvement based on the action plan.

### Public Health Preparedness

The Health Department continues to actively plan, exercise and collaborate with others to be prepared to respond to a public health emergency.

Preparedness Activities that occurred during 2010 include:

- Participation in a long term power outage table top exercise.
- Holding a table top exercise on our communicable disease response procedure.
- Developing a Functional Needs Shelter Plan which integrated the new federal guidelines in collaboration with DSS and the American Red Cross.
- Providing trainings and presentations on subjects such as our Shelter Plan, bioterrorism, and infection control.
- Continued work with the regional committee and local faith organizations on the "Infection Control and Emergency Planning for Faith Communities Toolkit". The process of this collaboration and the toolkit were displayed at the Public Health Nurse Conference and presented at the Spring Communicable Disease Seminar.

As of January 1, 2010, the Health Department became a member of NEW (Northeast Wisconsin) Public Health Preparedness Consortium with Brown County Health Department acting as the fiscal agent.

**“By failing to prepare, you are preparing to fail”**  
- Benjamin Franklin

## Immunizations for Children and Adults

Immunization is one of the most important public health victories of the 20th century. However, many vaccine preventable diseases such as pertussis and measles have not been eliminated, and they can reemerge if vaccination levels drop.

71% of Fond du Lac County two year olds had received all recommended immunization in 2010. The national goal is 90%.

In 2010, Fond du Lac County administered a total of 19,024 immunizations to 13,994 children and adults. The Health Department provides all recommended childhood vaccines at no cost. In addition, we offer many recommended adult vaccines at no or low cost.

## Mother, Child and Family

Megan and Spencer next to the pack and play they received from the Safe Sleep Project.

The Maternal Child Health Program formed a collaboration with the Saint Vincent DePaul Society of Fond du Lac to provide cribs for infants who do not have a safe place to sleep. A family, that can not afford a crib or when an infant is identified to be in an unsafe sleeping environment, is provided with a voucher for a

Pack and Play bed, along with education on safe sleep practices.

The Maternal Child Health Program coordinates a Child Death Review Team. Law enforcement, medical examiner, fire department, social services, healthcare and legal representation make up the core team. The team meets a minimum of twice a year reviewing child deaths in the county with the goal of identifying community actions that can be taken to prevent future deaths.

## Prenatal and Postnatal Care

Public Health nurses provide an informal parent and baby home visit to assist families after the birth of their baby whether it is their first baby or they already have children. Mothers receive support and education, baby weight checks, health teaching on parenting and child development and referrals to community services. Our nurses visited 179 women and their infants in 2010.

Fond du Lac County provides access to medical, social, educational and other services to pregnant women who are considered high risk for adverse pregnancy outcome through our Prenatal Care Coordination Program. The components of this program are outreach, physical and emotional assessments, care plan development, ongoing care coordination and monitoring, along with health education and nutrition counseling. 113 women were provided Prenatal Care Coordination services.

**2010 MCH Goal**  
90% of babies born to non-MA eligible women receiving Prenatal Care Coordination will weigh greater than - 5.5 pounds.  
2010 Fond du Lac statistic is 91.7%.

## Family Foundations

Family Foundations is a home visitation program for first time mothers whose child is 0-3 and also are eligible for Medicaid. The program goals are to provide information and referrals which link families to appropriate and accessible community resources; to increase parental knowledge about child growth and development and child management techniques; to build family support and cohesion; to enhance parent-child relationships; to promote healthy lifestyles; to support families in their care giving and decision making roles. In 2010, 32 children and their parents

were enrolled in Family Foundations receiving 602 home visits.

## WIC

WIC is the Special Supplemental Nutrition Program for Women, Infants, and Children, providing nutrition, education and healthy food for income eligible families. The Fond du Lac County WIC program served 3,403 individuals in 2010, averaging 2,015 participants per month. WIC vouchers totaling \$1,216,144 were redeemed at Fond du Lac County grocery stores.

WIC is committed to promoting and supporting breastfeeding. In 2010 WIC staff received training to be better able to encourage and assist breastfeeding women. Two part-time breastfeeding peer counselors teach breastfeeding classes, are available for telephone contacts, and to make home visits to new mothers. With these efforts WIC's breastfeeding statistics have improved from 23.7% in 2008 to 31.6% of WIC infants exclusively breastfed for 3 months in 2010.

## Human Health Hazards

To protect the health of the citizens of Fond du Lac County, the Health Department in collaboration with Code Enforcement investigates human health hazard complaints. If a human health hazard is found the Health Department, Code Enforcement and Corporation Counsel work with the owner to ensure safe removal (abatement) of the hazard. Mold was the most frequent human health hazard complaint investigated. 85 human health hazard complaints were investigated in 2010 with 41 abatement orders issued.

## Oral Health

Oral health is essential to the health and well-being of all Wisconsin residents. Virtually everyone will have some sort of dental problem during his or her life, but regular dental care can prevent minor problems from becoming major ones. In children, the immediate consequences of poor oral health can result in psychological and social stressors, self-esteem, difficulty eating, swallowing, and speech. Dental care access for children and adults covered by Medicaid is and has been a major concern in Fond du Lac County as well as across the State of WI and the nation. The Save a Smile Program, a unique public/private partnership, was started in 2007 to increase dental care access for children with Medicaid.

### 2010 Statistics

Participating Fond du Lac County Dentists: 39  
Number of Children Enrolled: 1025  
Number of office visits: 1690  
Waiting list: 0  
Children referred out of county: 0

Other Oral Health preventive programs included:

Fluoride Varnish application

- 466 Head Start children and 100 WIC enrolled children participated

Dental Sealants

- 90 Second grade students received dental sealants through the Seal a Smile Program

Fluoride Mouthrinse Program

- 809 students participated

## Water Quality

Safe, clean water is one of the most important substances in our lives - for drinking, cooking, bathing and cleaning. Municipal water systems test their water regularly to ensure it is safe, but it's up to private well owners to test their well water annually and properly maintain their well. The Health Department operates a Safe Drinking Water Act Lab licensed by the WI Department of Agriculture for bacteria analysis. During 2010 the Health Department analyzed 830 water samples with 30% (251) being unsafe (coliform positive). In addition, 3% (24) tested positive for E. coli bacteria which indicates the presence of human or animal fecal contamination.

Nitrate analysis is also available for drinking water samples. Nine of the 128 samples submitted for nitrate analyses were found greater than 10ppm/L, the state and federal standard for drinking water. Children under 6 months and pregnant women are advised to stop drinking this water immediately.

Through a contract with the Wisconsin Department of Natural Resources, 150 transient non-community water supplies were tested for bacteria and nitrate. These are wells that provide water to 25 or more people for 60 days or more per year.

A well water testing program was offered to residents of the Towns of Taycheedah and Empire. The UW Fond du Lac Extension in collaboration with the Health Department helps the Towns to coordinate this program with the UW Stevens Point Center for Watershed Science and Education. This program provides well owners an opportunity to check well water quality at a reduced price and also to receive educational information.

Through a Supplement Social Services Block Emergency Disaster Relief Grant the Health Department along with Code Enforcement staff worked to follow up on 2008 flood impacted wells within the county. Well owners who had received unsafe well water test results following the 2008 flood were contacted and offered free bacteria testing of their well. They received follow up visits, education and guidance based on the test results.

A total of 497 samples were analyzed from the 1325 well owners that were contacted – 132 were found unsafe with 14 having E.coli present. The SSBG Disaster Grant provided 27 stipends to well owners for repair, cleaning and maintenance of the impacted wells.

Education in ground water quality and protection continues to be a high priority for staff when dealing with questions and concerns regarding Fond du Lac County groundwater.

## Food Safety Program

Environmental health staff works with retail food stores, restaurants, hotels, bed and breakfast establishments, public swimming pools including water park attractions, campgrounds, and tattoo and body piercing establishments to educate employers and employees about the importance of safe, sanitary establishments operated by knowledgeable staff. In 2010:

- 945 routine inspections were conducted
- 135 pre-inspection consultations were provided
- 31 complaints were investigated
- 4 enforcement actions were taken.

Educating establishment staff and consumers about safe food practices, proper temperatures for food cooking, serving and storage, along with safe lodging and recreation benefits those who live, work and visit Fond du Lac County.

## Childhood Lead Testing

There is no safe level of lead in the human body; even very low levels of lead exposure can cause permanent brain damage and negatively affect health throughout the child's life, especially those between 6 months and 6 years of age. Many lead hazards still exist in homes and the environment, including paint, vinyl mini-blinds, chalk, candlewicks and others. These hazards are commonly present during painting and remodeling of pre-1978 housing.

### 2010 Fond du Lac County Blood Lead Testing

Total Number of Tests	417
Tests>15-19 ug/dl	1
Tests>20+	1
Home Investigation Inspections	2

The Centers for Disease Control and Prevention defines lead poisoning in children as a blood lead level of 10 or greater. In Fond du Lac County a child with a lead level of 15 or greater is provided with follow-up and consultation by a Public Health Nurse. Follow-up may include phone calls, home visits, consultation with the primary health care provider and a home lead risk assessment by Code Enforcement's Environmental Health Specialist. The ultimate goal is to prevent childhood lead poisoning by reducing and eliminating environmental lead exposure.

### East Central Radon Information Center

The Health Department and UW Extension provides information on the importance of radon testing, along with technical advice on radon mitigation to Outagamie, Sheboygan, Winnebago and Fond du Lac County residents.

The U.S. Environmental Protection Agency estimates that radon is the second leading cause of lung cancer after smoking and is responsible for several thousand preventable lung cancer deaths each year. There is no way to know if a home has elevated concentrations of radon except by conducting a radon test. Test kits are available at the Health Department.

The Health Department and UW Extension staff set up displays throughout the county and work with the Home Builders Association to provide education to the public, home builders and home owners on the importance and ease of eliminating radon risks to those who live in the home.

## Tobacco Control and Prevention

Tobacco is the single leading preventable cause of death in the United States killing over 400,000 people each year. That is the equivalent of three jumbo jets crashing every day for a year with no survivors. Tobacco claims more lives than drugs, alcohol, firearms and motor vehicle accidents combined. In Fond du Lac County, approximately 131 die annually of illnesses directly related to smoking. Cigarette smoking causes 77% of all lung cancer deaths and of all deaths from cardiovascular disease in Fond du Lac. In 2010, an estimated \$2.8 billion in health care costs were paid in Wisconsin as a result of diseases caused by smoking, with \$49.3 million paid in Fond du Lac County; approximately \$498 for every man, woman and child in Fond du Lac County.

The good news is that tobacco prevention programs work by taking a comprehensive and evidence-

### 2010 Fond du Lac County Tobacco Use (percentage)

	WI	FdL Co
Youth	20.7	20.7
Adult	19.5	21.6
Pregnant Women	14.9	15.8

(Burden of Tobacco 2010)

based approach to prevention. According to the *FDL School District Health Survey 2010*, comparing 2002 to 2010 survey results: students reporting being a current smoker decreased from **28%** in 2002 to **17%** in 2010, parent disapproval of students smoking increased from **79%** in 2002 to **87%** in 2010, friends never asking or encouraging students to use tobacco changed from **66%** in 2002 to **72%** in 2010. In 2002 **71%** of Students reported that they found tobacco very/fairly easy to obtain and in 2010 only **49 %** reported tobacco

very/fairly easy to obtain. Student's who reported never smoking changed from **51%** in 2002 to **64%** in 2010. Although we have made progress with cigarette use, other tobacco use, cigars, cigarillos, or little cigars use changed from **12%** in 2002 to **15%** in 2010.

In 2009 the Department of Health Services Tobacco Prevention and Control Program released a competitive grant that would provide a regional approach for tobacco prevention efforts statewide, in large part due to a 55% funding cuts to the program. The Fond du Lac County Health Department was selected to serve as the lead agency for a multi-jurisdictional tobacco control coalition that includes Fond du Lac, Green Lake, Marquette, Waushara, and Washington Counties. The merger resulted in a newly formed tobacco control coalition "Five Counties for Tobacco-Free Living" Tobacco Control Coalition is a group of community organizations and county residents with the mission to:

- Support and promote tobacco-free policies which include reducing everyone's exposure to secondhand smoke in homes, workplaces, and other public settings.
- Decrease tobacco access to youth, which includes monitoring of illegal sales to minors and marketing that targets youth.
- Assist in the understanding and implementation of FDA regulations of tobacco products
- Reduce disparities of smoking rates, and promoting cessation among adults and youth.

### Statewide Initiatives

Five Counties for Tobacco-Free Living coalition members educated legislators on concerns related to OTP (Other Tobacco Products) that are candy flavored, are cheaper than cigarettes, placed in self-serve displays and are not under the same FDA regulations as cigarettes.

Strawberry flavored tobacco products next to candy

### Tobacco Retailer Compliance Checks

Under mandates from the Federal Government, all states have to maintain a less than 20% rate of tobacco sales to minors to avoid the loss of 10 million dollars in block grant funding for federal substance abuse and treatment programs. Fond du Lac County, Ripon, North Fond du Lac, Waupun and Campbellsport collaborate with the Health Department on tobacco retailer compliance checks. There were 86 compliance checks completed in 2010 that resulted in 17 sales of tobacco to minors, 11 received citations.

### Clean Indoor Air Initiatives

The Fond du Lac County Health Department was the lead agency responsible for community education in the five counties after the passage of a comprehensive Statewide SmokeFree Workplace Law that went into effect on July 5, 2010. The Health Department provided support and resources to Waushara, Marquette, Green Lake, Washington County Health Departments, Law Enforcement, building inspectors, and municipal clerks, as well as various businesses in these five counties areas. Educational toolkits that included mandatory signage and frequently asked questions about the statewide SmokeFree Law were created and made available to municipal clerks, Law Enforcement and businesses.

### Youth Activities

Theisen, Woodworth, and Sabish Middles Schools and the FDL High School have sustained a FACT (Fighting Against Corporate Tobacco) group for years in Fond du Lac. The first ever WLA (Winnebago Lutheran Academy) FACT meeting was September 22, 2010.

FACT member doing sidewalk chalking

Fond du Lac FACT members attended and presented at the 2010 Annual Tobacco Control Legislative Breakfast in April. FACT members participate in activism in the community educating people on the negative health effects of tobacco products and on how the tobacco companies are targeting kids. Members also meet with local legislators to educate them as well and encourage policy changes. FACT members attend regularly scheduled meetings and hold trivia contests at their schools in conjunction with national campaigns including: Kick Butts Day, World No Tobacco Day, and the Great American Smoke-Out.

## Jail Health

Jail Health Staff

Fond du Lac County Jail Health Services provides health care to regular status inmates incarcerated in the Fond du Lac County Jail. 12,913 nurse contacts were made with inmates in 2010. Fond du Lac County Jail Health Service is accredited by the National Commission on Correctional Health Care.

## Public Health Nursing Visits

Fond du Lac County residents received health teaching, health supervision of a medical condition and referrals to other community support services. 1,673 Public Health Nursing visits were provided in 2010.

Referrals are accepted from healthcare providers, support agencies, families and individuals.

## Public Health Nursing Services to Schools

The health, well being and safety of children in schools is a priority for the Fond du Lac County public health nurses, along with school nurses. Healthy children are successful learners. Fond du Lac County has 17,284 students in 56 public and private schools. In collaboration with our schools, school based immunizations clinics were conducted in the spring of 2010 to enhance compliance with the new requirements of the State of Wisconsin Immunization law.

## Home Health

Home health care provides treatment in the home for an illness or injury. Fond du Lac County operates a Medicare/Medicaid certified agency offering skilled Registered Nurse, Home Health Aide, Physical Therapy, Occupational Therapy and Speech Therapy in the home on a part time intermittent basis. Our goal is for patients to regain their independence through rehabilitative services, or in the case of long-term health problems to maintain their existing level of functioning and help them learn to cope with their illness or disability. 116 Fond du Lac County residents received home health care services.

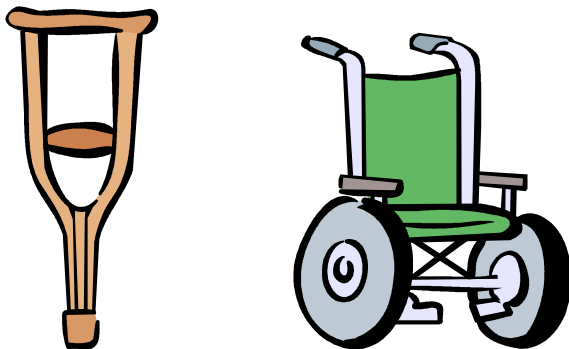

Joe & Katie Guelig with Julie Schmidt  
Home Health Aide

Performance outcomes are monitored regularly and we meet or exceed the national percentile in discharging our patients without readmission to a hospital or the need for urgent and emergent care.

### Loan Closet

Many times supportive durable medical equipment is recommended for the individual's safety. 60 Fond du Lac County residents were able to loan durable medical equipment such as walkers, wheelchairs, commodes, and bath benches on a temporary basis at no cost.

### Foot Care Clinics

As we age or due to a disability some people are unable to safely clip their toenails and have no one to help them. To promote good foot health, foot care clinics are offered in collaboration with our City and County Senior Centers at a reasonable cost. 879 residents received foot care services in 2010.

Frances Bord receiving foot care from Rick Hau R.N.

### Personal Care

Our goal is to maintain individuals in their own home, where they want to be and prevent premature placement in more restrictive environments such as a CBRF or nursing home. Fond du Lac County operates the only Medicaid certified personal care agency in Fond du Lac County providing assistance with activities of daily living such as bathing, transferring, toileting, meal preparation and laundry.

- 2,245 personal care worker hours to 14 patients were provided in 2010.

Though the financial support of the Visiting Nurses Board, Senior Services and patient donations 23 elderly and disabled were able to receive assistance with a weekly bath, allowing them to be safer in their own home.
